Explains construction professional practice in an appealing, succinct, and relatively informal way This book details the management of construction projects from beginning to end, concentrating on the principles underlying what construction professionals like architects do. It covers the entire process—from the initial meetings with clients through the design, recruitment of a contractor, contract management, construction and handover—all without referencing legal cases, contract clause numbers, laws, statutes, or the complex jargon that can muddle comprehension. The first part of Professional Practice for Architects and Project Managers offers enlightening chapters that cover: professional standards, perks of the job, bonds and parent company guarantees, of meetings, letter writing, the RIBA Plan of Work, and Building Information Modelling (BIM). The second section teaches all about dealing with the clients, and includes chapters that discuss the extent services, fee negotiations, conflicts of interest, and more. Next the book looks at such on-the-job responsibilities as surveys, ground investigation cost estimates, work schedules, letters of intent, etc. The final section covers everything readers need to know about dealing with a building contract in progress, informing them about advance payments, insurance site inspections, contractor disputes, terminations, final certificates, and more. Details the entire process of managing a construction project, including dealing with clients, the design process, running a construction project, and more Highlights what the construction professionals do in their positions Shows how principles of construction management are applied in practice Written in a reader-friendly and accessible way Professional Practice for Architects and Project Managers is an excellent resource for architects and other construction professionals such as contract administrators, project managers, quantity surveyors, and contractors. This authoritative and accessible guide for librarians and

computer scientists explores the technologies behind digital libraries, choices to be made in building them, and the economic and policy structures that affect them. In *Legal Strategy*, well-known professor, J. Zwier focuses on pre-litigation, transactional, and negotiation processes, and describes each in a way that brings together the basic of each discipline. Zwier describes how, once a lawyer determines the end goal the client desires, the lawyer must explore the facts and procedural alternatives most likely to get there. By getting lawyers to focus in a continual exercise of deliberating on what matters most, Zwier sets forth three steps in legal strategy: fact investigation, client counseling, and implementations of the client's decision.

*Corruption... How can policymakers and practitioners better comprehend the many forms and shapes that this social pandemic takes? From the delivery of essential drugs, the reduction in teacher absenteeism, the containment of illegal logging, the construction of roads, the provision of water and electricity, the international trade in oil and gas, the conduct of public budgeting, procurement, and the management of public revenues, corruption shows its many faces. 'The Many Faces of Corruption' attempts to bring greater clarity to the often murky manifestations of this virulent and debilitating social disease. It explores the use of prototype road maps to identify corruption vulnerabilities, suggests corresponding 'warning signals,' and proposes operationally useful remedial measures in each of several selected sectors and for a selected sample of cross cutting public sector functions that are particularly prone to corruption and that are critical to sector performance. Numerous technical experts have come together in this effort to develop an operationally useful approach to diagnosing and tackling corruption. 'The Many Faces of Corruption' is an invaluable reference for policymakers, practitioners, and researchers engaged in the business of development. A working guide for various school officials charged with the day-to-day administration of Iowa public schools.*

"Aboriginal people have been able to use the courts to try to seek redress particularly when political options have been limited. To do this they have had to use historical arguments, and as such history and historians have had to enter the courtroom. This highly original book brings

together one of Australia's leading historians with two younger legal scholars to examine the ways in which history and the law have interacted in Australia. Far from being an abstract discussion, the book examines hundreds of federal court cases, interviewing judges, litigants, claimants and historians."--Provided by publisher. This compilation of original papers on information retrieval presents an overview, covering both general theory and specific methods, of the development and current status of information retrieval systems. Each chapter contains several papers carefully chosen to represent substantive research work that has been carried out in that area, each is preceded by an introductory overview and followed by supported references for further reading. Includes, beginning Sept. 15, 1954 (and on the 15th of each month, Sept.-May) a special section: School library journal, ISSN 0000-0035, (called Junior libraries, 1954-May 1961). Also issued separately. In this book look at Americans and their politics, the authors argue for a more complex understanding of the space occupied by politics in 19th-century American society and culture. Includes sections "Book reviews" and "Periodical literature." Expert systems allow scientists to access, manage and apply data and specialized knowledge from various disciplines to their own research. Expert Systems in Chemistry Research explains the general scientific basis and computational principles behind expert systems and demonstrates how they can improve the efficiency of scientific workflows and support decision-making processes. Focused initially on clarifying the fundamental concepts, limits, and drawbacks using computer software to approach human decision making, the author also underscores the importance of putting theory into practice. The book highlights current capabilities for planning and monitoring experiments, scientific data management and interpretation, chemical characterization, problem solving, and methods for encoding chemical data. It also examines the challenges as well as requirements, strategies and considerations for implementing expert systems effectively in an existing laboratory software environment. Expert Systems in Chemistry Research covers various artificial intelligence technologies used to support expert systems, including nonlinear statistics, wavelet

transforms, artificial neural networks, genetic algorithms, and fuzzy logic. This definitive text provides researchers, scientists, and engineers with a cornerstone resource for developing new applications in chemoinformatics, systems design, and other emerging fields. This successful textbook on predictive text mining offers a unified perspective on a rapidly evolving field, integrating topics spanning the varied disciplines of data science, machine learning, databases, and computational linguistics. Serving also as a practical guide, this unique book provides helpful advice illustrated by examples and case studies. This highly anticipated second edition has been thoroughly revised and expanded with new material on deep learning, graph models, mining social media, errors and pitfalls in big data evaluation, Twitter sentiment analysis, and dependency parsing discussion.
